

Jordan Patel

jordan.patel@language-tech.org | +1 (555) 789-3412 | Boston, MA

Professional Summary

Natural Language Processing (NLP) Engineer with experience designing and applying Transformer-based architectures. Experienced in textual cleaning, preprocessing pipelines, semantic search, and working with state-of-the-art Hugging Face models.

Technical Skills

NLP & ML: NLP, Transformers, Hugging Face, Deep Learning, PyTorch, Scikit-learn

Programming & DB: Python, SQL, PostgreSQL, Git, GitHub

Deployment: Docker, FastAPI

Professional Experience

NLP Research Engineer | Language Labs | 2024 - Present

- Built text processing tokenizers and fine-tuned BERT and GPT models using Hugging Face Transformers.
- Implemented semantic search engines on top of PostgreSQL data stores using PyTorch embeddings.
- Deployed multi-threaded text classification pipelines in Dockerized FastAPI microservices.

Projects

Conversational QA System

Engineered QA systems with Hugging Face architectures. Applied extensive textual clean preprocessing to eliminate duplicate spacing, HTML tags, and noisy punctuation prior to tokenization.

Education

B.S. in Computer Science & Linguistics | Boston University | 2020 - 2024
